### Extreme Panel Tech., Inc.

#### Build Stronger, Faster, Greener. Build with SIPs.

Extreme Panel Tech., Inc. is a manufacturer of Structural Insulated Panels (SIPs) for residential and commercial use.

The Panels are precision cut by a CNC machine according to computer-generated drawings. SIPs are conducive to green building because of their energy saving properties. The super tight envelope reduces the demand for energy and promotes a healthy indoor environment. Increased efficiency will do more to protect the environment than filling the home with so-called "green" products. Reduced demand for energy also translates into decrease greenhouse gases being emitted into the environment.

SIPs are extremely strong as they are approved in seismic zones and hurricane and tornado areas. Extreme SIPs are code listed under ICC and are third-party tested by UL.

Extreme SIPs qualify for Energy Star, LEED, and other programs designed for green building concepts. Extreme SIPs are also FSC certified (License Code C019842). SIPs naturally qualify where other building methods struggle to meet qualifications.
